Marvin Pescos

Back-End Developer
Panabo City, Davao del Norte, Philippines
marvinpescos@gmail.com | github.com/MarvinPescos | linkedin.com/in/marvin-pescos-2943ba375

Professional Summary

Back-end developer and fourth-year Bachelor of Science in Information Technology student at Davao del Norte State College, specializing in Python, FastAPI and PostgreSQL. Experienced in designing and deploying RESTful APIs, including a multi-tenant content management system in production for two client websites. Additional experience in retrieval-augmented generation (RAG) and blockchain-based record integrity.

Education

Davao del Norte State College — Panabo City
Bachelor of Science in Information Technology — *2023 – 2027 (Expected)*

- **Capstone Project:** LexChain — Digital Notarial Register

Technical Projects

Multi-Tenant CMS API — Back-End Developer — 2026
Content API for local business websites | GitHub

- Designed and developed the back-end API serving content for multiple independent business tenants, including retail shops, churches and cafés.
- Deployed to production, powering two live client websites: Cold Brew Coffee Co. and Gospel Bible Baptist Church.
- Implemented request rate limiting with Redis and managed database schema changes through Alembic migrations.
- Deployed and hosted the API on AWS; stored tenant media in a private Amazon S3 bucket using presigned URLs for direct client uploads, per-tenant key prefixes, file type and size validation, and least-privilege IAM access.
- Collaborated with a front-end developer responsible for the client-facing interfaces.
- **Technologies:** FastAPI, PostgreSQL (Supabase), Redis, Alembic, AWS (S3)

LexChain — Back-End Developer, Capstone Project — 2026
Back-end API for a digital notarial register | GitHub

- Developing the back-end of a system that enables notaries public to manage notarial books, pages and entries.
- Implemented retrieval-augmented generation (RAG) search over legal documents using pgvector embeddings.
- Recorded document hashes on-chain through Solidity smart contracts to provide tamper-evident records.
- Containerized application services with Docker.
- **Technologies:** FastAPI, PostgreSQL (Supabase), pgvector, Solidity, Docker

Technical Skills

Languages: Python, Solidity
Frameworks and Libraries: FastAPI, sentence-transformers
Databases: PostgreSQL, pgvector, Redis, Supabase
AI and LLM Applications: RAG pipelines, text embeddings, LLM integration via Microsoft Foundry (Azure), Langfuse
Blockchain: Solidity, Foundry, Web3.py
Tools and DevOps: AWS (S3), Docker, Git, GitHub, Alembic, Bruno
